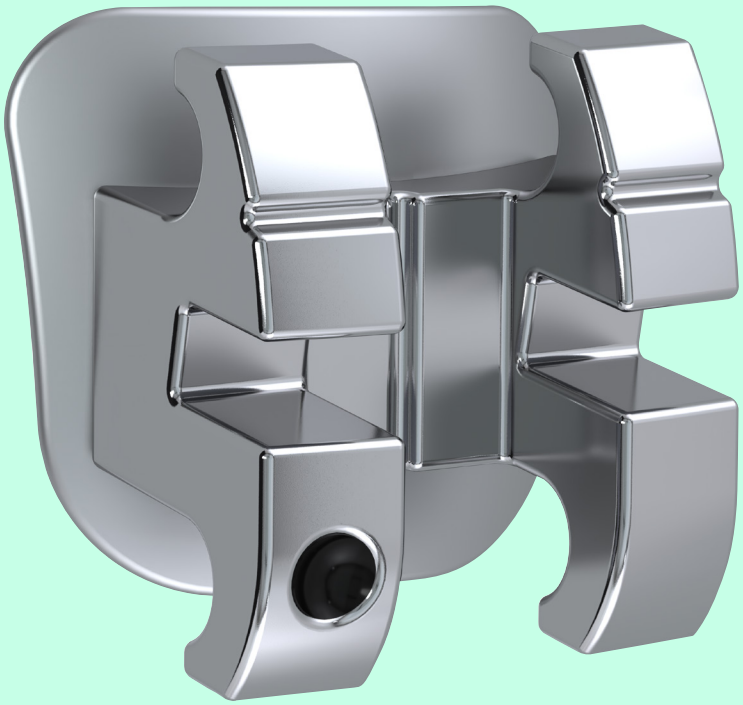
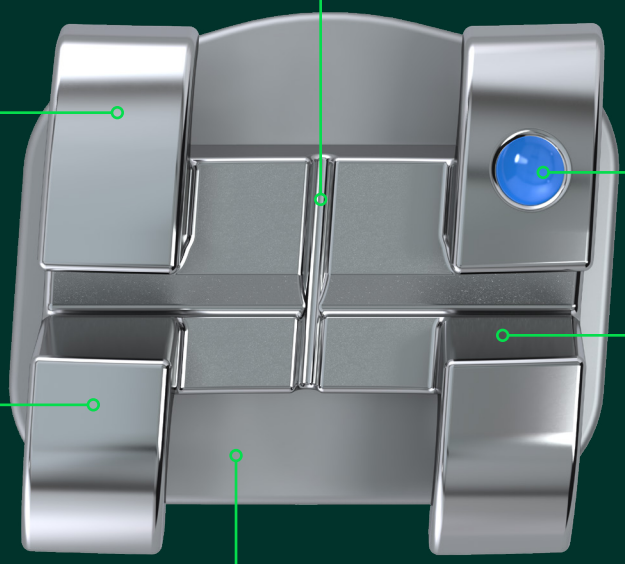
Proven bracket design for consistency and reliability

3M™ Victory Series™ Low Profile Brackets



A treatment choice you and your patients will appreciate

A beautiful smile is the ultimate goal, but a positive patient experience is just as crucial for successful treatment. Victory Series™ Low Profile Brackets are designed with this in mind. They offer a proven treatment design along with a low profile and smooth, curved features. These brackets are the perfect choice to help ensure both you and your patients have a comfortable and effective treatment journey.



Efficient and effective treatment for any case requirement

With 3M™ MBT™ Versatile+ Appliance System, Victory Series Low Profile Brackets give you the power and versatility needed to manage the unique challenges of each new case, ensuring consistent and optimal patient outcomes.

Features you can rely on

With the Victory Series™ Low Profile Bracket, the mesial-distal dimension is not compromised even though the bracket has a low profile. You maintain the rotational control you need to get the results you desire. Your patients will appreciate the comfort.

A unique rhomboid design with a flatter, compounded radius accommodates naturally occurring variation in tooth surfaces. This design assures three-point contact for increased tooth adaptation. Positioning is made easier and more accurate because their shape follows the natural vertical line of the tooth.

- Ample under tie-wing area for easy ligation and double ligation

- Low profile reduced occlusal interference without performance sacrifices

- Contoured micro-etched base
- Rhomboid base design for increased tooth adaption
- Two-degree distal offset in lower cuspid slots to reduce mesial rotation

Available with 3M™ APC™ Flash-Free Adhesive

Victory Series Low Profile Brackets also offer the superior efficiency of revolutionary APC Flash-Free Adhesive. That means less chair time and a better overall bonding experience for your patient.

Eliminates the flash removal step at bonding

Significantly reduces bonding time*

*data on file

Ensures less than 2% bracket bond failure rate within 90 days of bonding

Enhance your system for maximum efficiency and patient comfort

3M™ Clarity™ Advanced Ceramic Brackets

Small, low profile esthetic bracket enhances patient comfort without compromising strength. Translucency blends with tooth color, while resisting staining. Combine with 3M™ APC™ Flash-Free Adhesive for a complete system designed for optimal efficiency.

3M™ Victory Series™ Superior Fit Buccal Tubes

Offer excellent handling characteristics, optimized tube-to-tooth fit and a strong reliable bond. Combine with APC Flash-Free Adhesive for a complete system designed for optimal efficiency, control and versatility.

3M™ AlastiK™ Easy-to-Tie Ligatures

Angled to make ligature placement easier for you and your patients. Choose a wide variety of colors to match patient preference.

3M™ Forsus™ Class II Correctors

An “off-the-shelf” aesthetic treatment solution that can be added at any time during treatment, providing efficient and proven treatment. Forsus Correctors can be used with or without molar bands, making them a versatile and convenient choice.
